

Todo Application Test Case

To complete the test case plan, fill out the information for Project, Course, Description and Date in the header below.

Project: Todo Application Test Case	
Course: CSD 380 DevOps	
Description: Functional test cases for Todo Application	
Date: 2025/11/15	

Contents

Test 1: Verify standard URL access	3
Test 2: Create new task item	8
Test 3: Block empty task submission	12
Test 4: Edit existing task	14
Test 5: Invalid URL 404 page	17

Todo Application Test Case

For each test, the developer should: provide a test description, a test objective, the developer name and date tested. For each step, fill out the actions to be taken and describe the expected results, and indicate yes or no for each step depending upon the result. The peer tester should provide their name, date tested, indicate yes or no for each step depending upon the result, and a screenshot (thumbnail) of the result.

Todo Application Test Case

Test 1	Test 1: Verify standard URL access			
	Test Objective: Confirm that the site loads correctly through the official URL.	Developer: Clint Scott Date tested: 2025/11/15	Peer tester: Clint Scott Date tested: 2025/11/16	
Step	Action	Expected results:	Developer pass/fail	Tester pass/fail + Screenshot

Todo Application Test Case

1	Navigate to https://buwebdev.github.io/todo/	Landing page loads without errors.	Yes, pass.	PASS 
---	---	------------------------------------	------------	--

Todo Application Test Case

2	Refresh the browser.	Page reloads successfully.	Yes, pass.	PASS 
---	----------------------	----------------------------	------------	--

3	Navigate to http://buwebdev.github.io/todo/	Browser automatically redirects to https://buwebdev.github.io/todo/ / and page loads without errors.	Yes, pass.	PASS 
4	Check page title.	Title displays 'ToDo'.	Yes, pass.	PASS 

Todo Application Test Case

5	Inspect console.	No errors appear.	Yes, pass.	
Comments	All steps for verifying standard URL access were successful, confirming that the application loads correctly via both HTTPS and HTTP, with a proper redirect. The console inspection revealed no initial errors, which strongly indicates that the initial deployment and loading were successful. This test confirms the fundamental accessibility and integrity of the main landing page, making the application ready for core functionality testing.			

Todo Application Test Case

Test 2	Test 2: Create new task item			
	Test Objective: Ensure the Add Item form accepts valid input and displays the new task.	Developer: Clint Scott Date tested: 2025/11/15	Peer tester: Clint Scott Date tested: 2025/11/16	
Step	Action	Expected results:	Developer pass/fail	Tester pass/fail
1	Open Todo application.	Page loads properly.	Yes, pass.	PASS 

Todo Application Test Case

2	Enter valid task text.	Input accepted.	Yes, pass.	PASS  A screenshot of a 'Task Form' with a title bar. Below the title, there is a label 'Task' and a text input field containing 'Clint Test'.
3	Click Add button.	Task appears in list.	Yes, pass.	PASS  A screenshot of a 'Todo List' with a title bar. Below the title, there is a list of tasks: 'Attend 2PM meeting', 'Schedule meeting with Jim', 'Onboard new sales team members', 'Submit updates to sales manager', 'Email quarterly update', 'Mobile app launch', and 'Clint Test'.

Todo Application Test Case

4	Verify text matches.	Displayed text matches' input.	Yes, pass.	PASS 
---	----------------------	--------------------------------	------------	---

Todo Application Test Case

5	Check for errors.	No visible errors.	Yes, pass.	PASS Todo List Attend 2PM meeting Schedule meeting with Jim Onboard new sales team members Submit updates to sales manager Email quarterly update Mobile app launch Clint Test
Comments	The process of creating and displaying a new task has completed steps 1-4, confirming that the input is accepted and that the new item is immediately appended to the list with the correct text. However, the current test steps are inadequate because they do not evaluate data persistence. The test case should be revised to include a page refresh after adding the task for Step 5. This action will demonstrate that the application does not save added tasks, which is a significant functional defect that needs to be addressed.			

Todo Application Test Case

Test 3	Test 3: Block empty task submission			
	Test Objective: Prevent creation of empty tasks.	Developer: Clint Scott Date tested: 2025/11/15	Peer tester: Clint Scott Date tested: 2025/11/16	
Step	Action	Expected results:	Developer pass/fail	Tester pass/fail
1	Open Todo app.	Page loads.	Yes, pass.	PASS 

Todo Application Test Case

2	Leave input blank.	Blank input remains unchanged.	Yes, pass.	PASS 
3	Click Add button.	Task is not added.	Yes, pass.	PASS 
4	Check validation.	UI blocks submission.	Yes, pass.	PASS 

Todo Application Test Case

5	Verify list unchanged.	Existing tasks unaffected.	Yes, pass.	PASS 
Comments	The application effectively prevents the creation of empty tasks, which align with the test objective. The user interface blocks the submission, ensuring that the existing task list remains unchanged. This critical front-end validation feature ensures data quality and enhances the user experience. Since this is a self-test, I recommend adding a visual cue, such as a border or an error message, to inform users clearly when they attempt to submit a blank task.			

Test 4	Test 4: Edit existing task			
	Test Objective: Confirm task editing works with valid input.	Developer: Clint Scott Date tested: 2025/11/15	Peer tester: Clint Scott Date tested: 2025/11/16	
Step	Action	Expected results:	Developer pass/fail	Tester pass/fail

Todo Application Test Case

1	Open Todo app.	Page loads.	Yes, pass.	PASS 
2	Click Edit icon.	Edit form appears.	Yes, pass.	PASS 

Todo Application Test Case

3	Modify task text.	Input accepted.	Yes, pass.	PASS 
4	Click Save.	Task updates on list.	Yes, pass.	PASS 
5	Verify replacement.	New text appears.	Yes, pass.	PASS 
Comments	The steps for modifying a task have been passed, demonstrating that the user can successfully open the Edit form, enter new text, and click 'Save' to update the task on the list immediately. For constructive feedback, the test case should be expanded to include a step that verifies data persistence after the edit, as other known issues with this application indicate that changes may not be saved upon page refresh. Additionally, I recommend adding a test to ensure that attempting to save a blank edit is blocked by validation.			

Test 5	Test 5: Invalid URL 404 page			
	Test Objective: Confirm users receive a custom 404 page.	Developer: Clint Scott Date tested: 2025/11/15	Peer tester: Clint Scott Date tested: 2025/11/16	
Step	Action	Expected results:	Developer pass/fail	Tester pass/fail
1	Go to /invalid-page.	Custom 404 page appears.	Yes, pass.	PASS 
2	Check message.	Readable 404 text displays.	Yes, pass.	PASS 

Todo Application Test Case

3	Check layout.	Page loads cleanly.	Yes, pass.	PASS A screenshot of a web browser window. The address bar shows the URL 'https://howtodev.github.io/todo/not-found'. The page content displays the text 'not found work!'. The browser interface includes standard navigation buttons (back, forward, refresh) and a user profile icon in the top right corner.
---	---------------	---------------------	------------	--

Todo Application Test Case

4	Click return link.	User returns to homepage.	No, fail. Missing return link.	FAIL – No return link  A screenshot of a web browser window. The address bar shows the URL 'https://howtodev.github.io/todo/not-found'. The page content is a plain white background with the text 'not found' at the top left. The browser's user interface, including the address bar, back/forward buttons, and a profile icon, is visible at the top.
---	--------------------	---------------------------	--------------------------------	--

Todo Application Test Case

5	Inspect console.	No critical errors.	Yes, pass.	PASS 
Comments	The primary objective has been successfully achieved: the application now shows a custom 404 page with the message "not-found works!" when an invalid URL is entered. This is functionally correct and prevents a generic browser error. However, the test failed on Step 4 because the 404 page lacks a functional "return link" or button, which hinders the user's ability to navigate back to the main homepage easily. This missing navigation element constitutes a usability issue that should be addressed to enhance the overall user experience.
